# Constructing an Acupuncture Treatment for Painful Conditions

## About The Seminar:

This workshop aims to offer some practical instruction on how to build an acupuncture treatment using painful conditions as the main example.

We will start from the ground up - with the collection of basic information through the cases history and examination and how this relates to the making of the diagnosis.

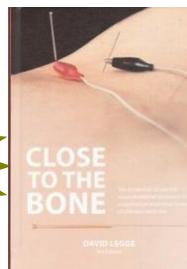

There will be discussion of the available models of diagnosis and the difficulties encountered when choosing between them.

The close relationship between the diagnosis and the structure of the treatment will be examined.

Rather than be very prescriptive, the workshop will stimulate a greater understanding of the processes involved, allowing the practitioner to explore a range of options to come up with an approach that works best for them.

The following topics will be included:

- Diagnostic process
- Case taking
- Examination
- Available models of diagnosis and treatment - strengths and weaknesses
- when are they most useful
- Choice of points
- Needle technique
- Supplementary techniques - including the use of moxa, cupping, and herbal medicine
- Treatment frequency

## This workshop is relevant for:

TCM Practitioners who would like to become more proficient and take their clinical expertise to a higher level; TCM students.

**TIME:** 9.30am-5.30pm

**DATE:** Sydney: Sunday, 17 June 2012

**VENUE:** Sydney Institute of Traditional Chinese Medicine

## About David Legge

David Legge has practised as an acupuncturist and osteopath for over 30 years specialising in the treatment of painful musculo-skeletal conditions. He is the author of the popular text '*Close to the Bone*' and has published the handbook '*Acupuncture Points and Meridians*', a set of *Trigger Point Charts* and *JingJin*. He has taught widely in Australia, the US and Europe.

David has spent his working life exploring how to get the best from both a Chinese medicine and an anatomical perspective when treating musculoskeletal disorder. An important recent step was the recognition that the JingJin theory could be used to describe the approach to treating muscular disorder that he had slowly developed over years of practice. Unfortunately, the poor traditional descriptions of the pathways was a hindrance to effective use of the system in the clinic. This led to a re-examination of the pathways in light of contemporary knowledge of the structure & function of the muscular system.
